

MOBILE WATER TREATMENT SOLUTIONS

Rapidly Deployed, Reliably Engineered:
Removing the Risk from Water

On-demand water treatment, **wherever you are**

Marmon Industrial Water's mobile water treatment solutions offer immediate response to your unique water challenges. Whether it's an **emergency, planned maintenance, or a longer-term need**, our flexible units deliver failsafe performance to ensure your water processes remain online and continuous. Because when it comes to treating water, **downtime is not an option**.

Unlike other systems hindered by distance limitations and the need for trailers to shuttle back and forth from depots, our mobile solutions break free from such constraints. **Unbound by transit time or location**, we bring our expertise and technology directly to you, no matter where you're at.

Unlock the advantages of our mobile rental solutions

Access to proven treatment technologies

without the burden of ownership or the need to make a CAPEX investment

Flexible contracts

and operating agreements to suit your needs

Rapid response solutions

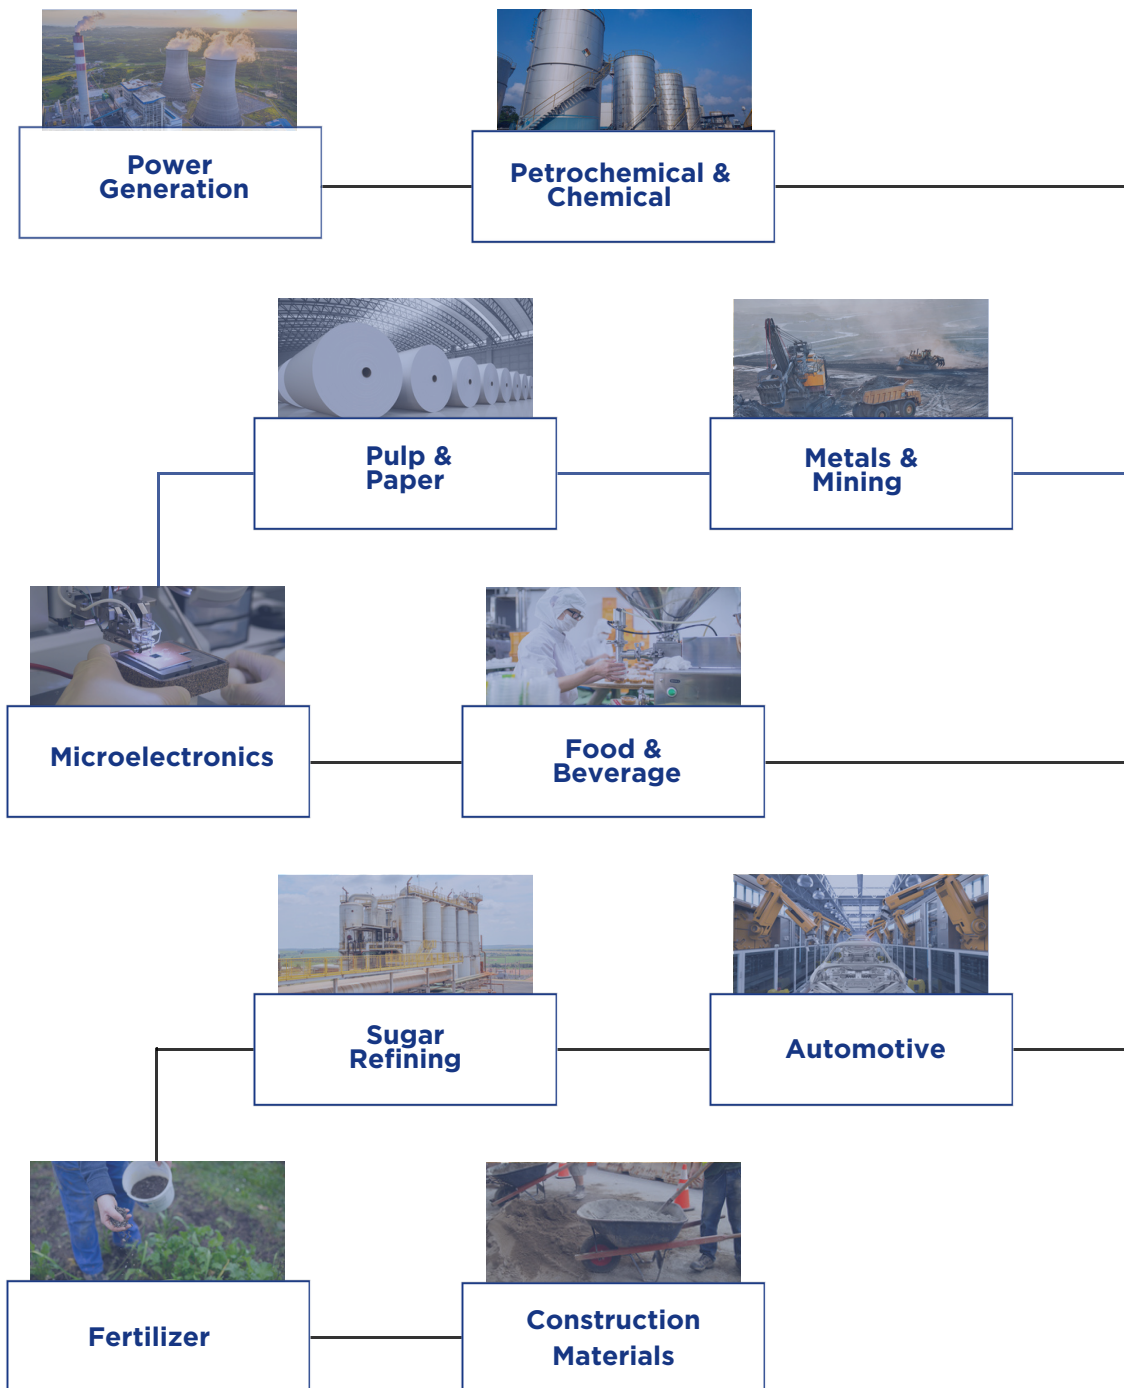

ensure continuous treatment and regulatory compliance, de-risking your operation

Cost-efficient and customizable

to your specific water treatment requirements

Markets we serve

Flexibility where it matters

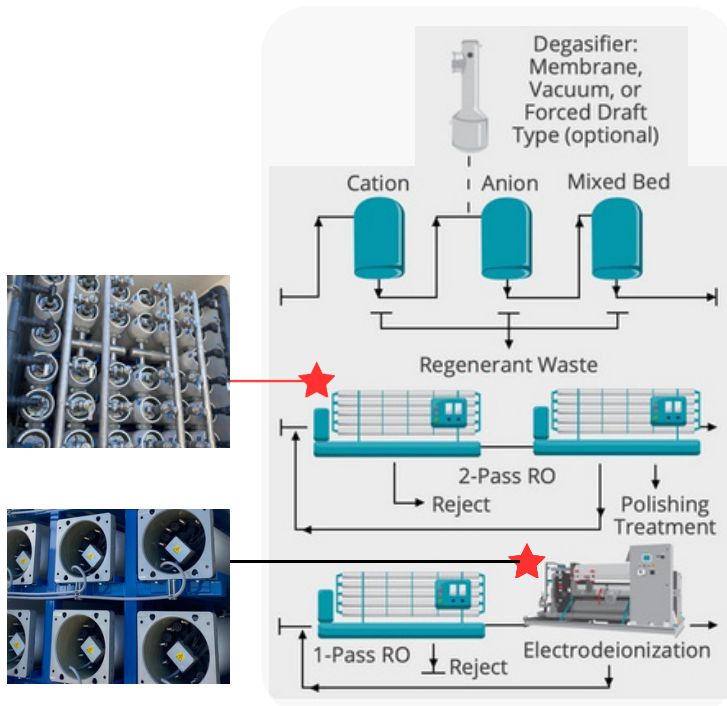

Marmon Industrial Water's rental fleet is based upon a foundation of tested expertise. We've harnessed tried and tested designs in mobile water treatment and integrated them into our equipment to create solutions that are uniquely differentiated in the market.

Our systems have been thoughtfully engineered to optimize water treatment in a compact footprint and provide as much flexibility for our customers where it's needed most.

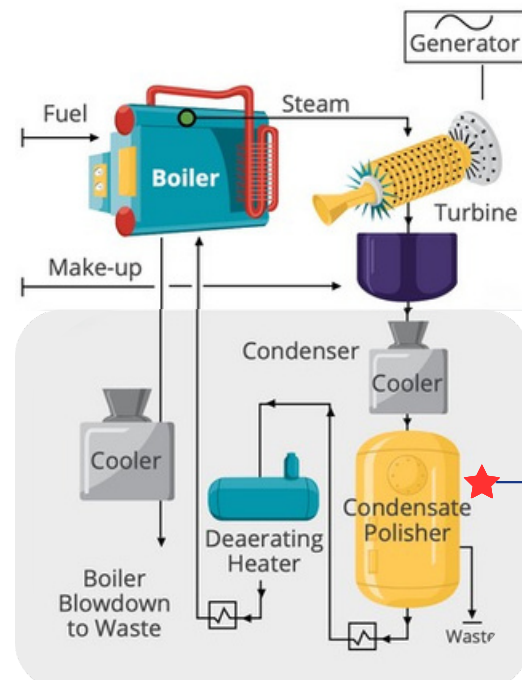

Typical Plant Water Needs

STEAM CYCLE MAKE-UP

CONDENSATE CYCLE

Our fleet

The **HIGHEST** product flow rates
available in the market

More compact
footprint

Fewer containers to achieve
output requirements

Simpler
operations

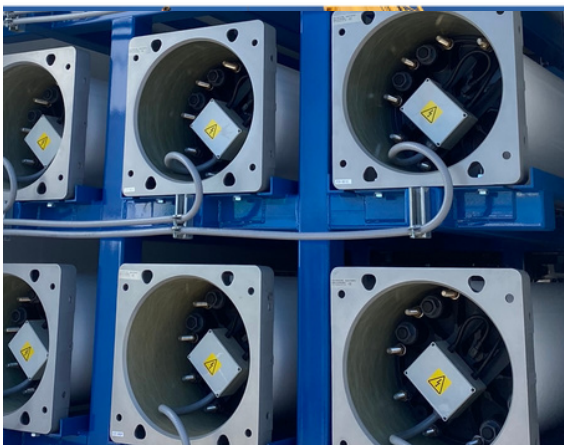

mPowdex® Mobile Condensate Polisher *High temperature/pressure filter demineralizer*

The mPowdex® Mobile Condensate Polisher, based on the Graver flagship Powdex® CP systems installed in thousands of industrial plants and utilities, **removes solid particulates and dissolved contaminants from steam condensate, enabling customers to recover and reuse a high value process stream without chemicals.** It is the only solution that cleans condensate at very high temperatures/pressures — eliminating the need to cool it down for treatment and reheat back up again: a simpler green process to conserve energy.

ROFlex900 Mobile Reverse Osmosis System *Operates as single pass OR two pass RO unit*

The ROFlex is a mobile reverse osmosis (RO) system in a containerized package that delivers **95-99% removal of suspended and dissolved solids** using high-rejection TFC spiral wound membranes. With a 900 gpm capacity, the **ROFlex offers the highest flow rate in the market.** For customers with higher capacity demands, this means the same amount of water can be treated in a more compact footprint compared to other systems, freeing up valuable space in your plant.

ElectroFlex Mobile Electrodeionization System *Chemical-free, continuous DI water production*

The mobile ElectroFlex Electrodeionization (EDI) system uses selective IX membranes, resins, and electricity to continuously polish RO permeate to demineralized quality. EDI uses only electricity to regenerate instead of costly and hazardous chemicals. The ElectroFlex system **eliminates the need for wastewater neutralization** and reduces environmental, health, and safety risks. The compact footprint of the ElectroFlex **requires 50-75% less operating space vs IX trailers** and enables the EDI reject to be recycled upstream of the RO for 100% recovery and zero waste production.

Why choose Marmon Industrial Water?

Our reputation is built on a legacy of proven performance, characterized by our commitment to providing customized water treatment solutions to industrial customers. Leveraging extensive knowledge in product and process technology, we excel in providing optimal solutions to complex water treatment challenges.

Marmon Industrial Water is defined by:

We have enhanced our product portfolio with many newer technologies and continue to provide value-added products, services, and solutions to the marketplace. By integrating **full life-cycle equipment and service solutions with** customized craftsmanship, our goal is to supply water treatment systems that improve our customer's businesses for the long term.

TRUST

With a legacy of over 180 years of water treatment, we are among the world's most experienced water technology companies.

INNOVATION

We offer a diverse technology portfolio and bring creative solutions to every customer challenge.

EXPERTISE

We harness our global presence and decades of technology and application knowledge to address unique market challenges.

STEWARDSHIP

Our approach prioritizes operational uptime, the lowest lifecycle cost, and providing water at your desired quality and quantity.

PARTNERSHIP

We cultivate lasting relationships by listening to your needs, tailoring equipment to your requirements, and mitigating risks.
